

M&G (Lux) Optimal Income Fund

USD Class A-H M F1 – Distribution shares

Monthly Fund Review as at 28 February 2026

Marketing Communication - for Professional Investors only

Highlights

- February was a strong month for developed market government bonds. Broadly, yield curves flattened, with yields at the long end being supported by safe haven demand and at the front end, being anchored by cautious central banks.
- We continued to trim the fund's overweight to French government bonds, reallocating capital to German bunds. Following strong relative performance, we exited our inflation-linked UK gilt position we added in 2025 and switched exposure into nominal gilts. In investment grade, we believe some valuations are appealing in the media sector and added to Alphabet during the month. We also added to Amazon in the retail sector. We reduced our exposure to the high yield sector further in February, as we see valuations as expensive.
- We continue to emphasise a defensive stance, favouring the premium on offer in sovereign bond markets, versus that available in credit. However we remain neutral on investment grade credit, through selective positioning in generally highly-rated names.

The main risks associated with this fund

The value and income from the fund's assets will go down as well as up. This will cause the value of your investment to fall as well as rise. There is no guarantee that the fund will achieve its objective and you may get back less than you originally invested.

Investments in bonds are affected by interest rates, inflation and credit ratings. It is possible that bond issuers will not pay interest or return the capital. All of these events can reduce the value of bonds held by the fund.

High yield bonds usually carry greater risk that the bond issuers may not be able to pay interest or return the capital.

The fund may use derivatives to profit from an expected rise or fall in the value of an asset. Should the asset's value vary in an unexpected way, the fund will incur a loss. The fund's use of derivatives may be extensive and exceed the value of its assets (leverage). This has the effect of magnifying the size of losses and gains, resulting in greater fluctuations in the value of the fund.

Investing in emerging markets involves a greater risk of loss due to greater political, tax, economic, foreign exchange, liquidity and regulatory risks, among other factors. There may be difficulties in buying, selling, safekeeping or valuing investments in such countries.

The hedging process seeks to minimise, but cannot eliminate, the effect of movements in exchange rates on the performance of the hedged share class. Hedging also limits the ability to gain from favourable movements in exchange rates.

Investing in this fund means acquiring units or shares in a fund, and not in a given underlying asset such as building or shares of a company, as these are only the underlying assets owned by the fund.

ESG information from third-party data providers may be incomplete, inaccurate or unavailable. There is a risk that the investment manager may incorrectly assess a security or issuer, resulting in the incorrect inclusion or exclusion of a security in the portfolio of the fund.

Further risk factors that apply to the fund can be found in the fund's Prospectus.

Recommended Holding Period	5 years

¹See important information section for explanation of average credit rating methodology.

The yield-to-maturity (YTM) figure shown here is calculated on a monthly basis. It shows the weighted average long term total yield of all the instruments held by the fund, assuming that all coupon payments are made – and reinvested at the same rate as the bond's current yield – and all principal payments are made. The figure is expressed as an annual rate.

The yield-to-worst (YTW) figure shown here is calculated on a monthly basis. This is a measure of the lowest potential weighted average yield of the instruments held in the fund. This metric can be used to evaluate the worst-case scenario for yield at the earliest allowable retirement date of the bonds held. This figure will be less than the YTM given the shortened investment horizon. The figure is expressed as an annual rate.

Benchmark: Until 24 August 2021 the name of the benchmark was 1/3 Bloomberg Barclays Global Aggregate Corporate Index USD Hedged, 1/3 Bloomberg Barclays Global High Yield Index USD Hedged, 1/3 Bloomberg Barclays Global Treasury Index USD Hedged. The benchmark is a comparator against which the fund's performance can be measured. The composite index has been chosen as the fund's benchmark as it best reflects the scope of the fund's investment policy. The benchmark is used solely to measure the fund's performance and does not constrain the fund's portfolio construction. The fund is actively managed. The investment manager has complete freedom in choosing which investments to buy, hold and sell in the fund. The fund's holdings may deviate significantly from the benchmark's constituents. The benchmark is not an ESG benchmark and is not consistent with the ESG Criteria. The composite index was introduced as the fund's benchmark on 7 September 2018.

ESG Standard Glossary

Additional ESG specifications: In the context of M&G, these are funds that are managed in accordance with specific ESG criteria or, where relevant, with an explicit ESG objective. They will have a number of minimum exclusions in place.

Engagement: Interaction with company management on various financial and non-financial, including ESG, issues. Engagement allows investors to better understand how a company is undertaking its operations and how it is interacting with its stakeholders, as well as advising on and influencing company behaviour and disclosures where appropriate.

ESG integration: Describes the explicit and systematic inclusion of Environmental, Social and Governance factors in investment analysis and investment decisions. It underpins a responsible investment approach, and allows investors to

better manage risk and generate sustainable, long-term returns.

Exclusions: The exclusion or restriction of investments based on the sector in which they operate, the products or services they provide or for other specific criteria, i.e. they are deemed to be in breach of the United Nations Global Compact principles on human rights, labour the environment and anti-corruption.

Voting: As the partial owners of a company, shareholders have the right to vote on resolutions put forward at a company's annual general meeting. These resolutions include the re-election of directors, executive remuneration and business strategy, among others, and may include resolutions put forward by shareholders.

Explanation of our climate metrics

The Weighted Average Carbon Intensity (WACI) is the metric used to report our funds' carbon emissions. It is a measure of how much CO₂ is being emitted per US\$ million of sales by each company that the fund invests in. This can be used to determine the likely effect a company is having on the environment. It can also help to compare the impact different companies have on the environment, and to compare companies against the broad market or the financial benchmark for the fund. However, this metric does not take into account the difference in carbon characteristics among sectors.

The WACI metric is one of many greenhouse gas emissions data points, each offering a different aspect of analysis on climate impact. M&G have selected this metric as it is applicable to multi-asset, equity and fixed income funds and it is aligned to the recommendations from the Taskforce for Climate Related Financial Disclosures (TCFD). It has also been chosen to align with M&G's groupwide target of transparency when it comes to the disclosure of climate emissions.

For the avoidance of doubt, this fund is not managed to a carbon emission objective and, the benchmark WACI (should funds have a benchmark) has been included for information purposes only.

Explanation of other sustainability indicators

More sustainable, better run and less harmful businesses - MSCI Analysis

The 'MSCI analysis' table shows the weighted average ESG score of the portfolio using MSCI, compared to either the fund's benchmark or to the named index, as indicated in the fund's Prospectus.

The 'Exposure to ESG bonds' table shows the percentage of the portfolio invested in ESG bonds, such as green bonds, social bonds, transition bonds, sustainability bonds or sustainability linked bonds.

Fund description

The fund aims to provide a combination of capital growth and income to deliver a return based on exposure to optimal income streams in investment markets, while applying environmental, social and governance (ESG) criteria. It seeks to make these investments using an exclusionary approach, as described in the prospectus. Typically, at least 50% of the portfolio is invested in a broad range of fixed income securities of any credit quality and from any country, including emerging markets, and denominated in any currency. The fund manager selects investments wherever he sees the greatest opportunities, based on his assessment of a combination of macroeconomic, asset, sector and stock-level factors. The manager may also hold up to 20% of the portfolio in company shares when he believes they offer better value than bonds. The fund's recommended holding period is five years. In normal market conditions, the fund's expected average leverage – how much it can increase its investment position by borrowing money or using derivatives – is 200% of its net asset value.

Glossary

Please find a link to our [glossary page](#) which provides an explanation of terms used in this document across our fund ranges.

Important information

On 8 March 2019 the non-sterling assets of the M&G Optimal Income Fund, a UK-authorised OEIC which launched on 8 December 2006, merged into the M&G (Lux) Optimal Income Fund, a Luxembourg-authorised SICAV, which launched on 5 September 2018. The SICAV is run by the same fund manager, applying the same investment strategy, as the OEIC.

For the avoidance of doubt, for fixed income funds, we count different entities belonging to the same company as separate issuers to arrive at the number of issuers in the fund, as shown under the key information section.¹The fund's average credit rating uses a mid-average rating (S&P, Fitch, Moody's or M&G's internal rating if no rating is available from these ratings agencies) of securities held by the fund. It excludes some derivatives that are used for efficient portfolio management only. Ratings should not be taken as a recommendation.

The M&G (Lux) Optimal Income Fund is a sub-fund of M&G (Lux) Investment Funds 1.
